## DETAILED ACTION

Newly added claims designated as claims 51-57 have been renumbered as claims 51-58, respectively, in accordance with 37 CFR 1.126. If any more claims are added, they should start with claim 59. To avoid confusion, reference should be made to renumbered claim numbers in the future because they are the official claim numbers. Accordingly, claims 1-23, 25-26, 29-37, 39-41 and 43-48 are pending in the application.

## Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13 and 51, drawn to a method of detecting cystic fibrosis, classified in class 435, subclass 29.
- II. Claims 14-22 and 52-53 drawn to a method of screening an agent, classified in class 435, subclass 4.
- III. Claims 23, 54-56, drawn to a compound, classified in class 514, subclass 1.
- IV. Claims 25-26, drawn to a method of treating, classified in class 424, subclass 184.1.
- V. Claims 28-37, and 39, drawn to a peptide, classified in class 530, subclass 300.
- VI. Claims 40-41, drawn to a method of treating with a peptide, classified in class 514, subclass 2.
- VII. Claims 43 and 45, drawn to a pentamer peptide comprising annexin residue 246, classified in class 514, subclass 17.
- VIII. Claims 44 and 57, drawn to a pentamer peptide comprising annexin residue 293, classified in class 514, subclass 17.
- IX. Claims 46-47, drawn to a method of making antibody by immunization with an immunogen, classified in class 424, subclass 184.1.
- X. Claims 48-50 and 58, drawn to an antibody against any annexin peptide containing a phosphorylated histidine, classified in class 424, subclass 139.1.

Application/Control Number: 09/944,030

Art Unit: 1644

The inventions are distinct, each from the other because of the following reasons:

Inventions IX and X are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the antibodies can be made by phage display libraries.

Inventions V, VII and VIII and VI are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the peptides can be used to make antibodies.

Inventions I-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions the methods of screening and detecting and treating have different endpoints and method steps.

Inventions III and IV-VIII are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case any of the peptide or generic compounds can be used in the method of treatment.

Inventions VII and VIII are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions prior art against invention VII would not necessarily read upon the claimed invention in invention VIII as the peptides are from different regions.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

## **Species election**

This application contains claims directed to the following patentably distinct species of the claimed invention: If Applicant elects Invention I or II they are required to elect a SINGLE species as recited in claims 7 or 21.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 7 and 11-13 are generic for Invention I, and claim 21 is generic for Invention II.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 1644

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patrick J. Nolan whose telephone number is 571-272-0847. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christina Y. Chan can be reached at 571-272-0841. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

Patrick Nolan, Ph.D.
